

Firmware 3.6.0

Language Support, i-Series and SMxx Revamp

Since Bedrock is now available worldwide, we have added translation in Chinese, Korean, Thai, French, Spanish and Dutch (please get in touch at info@bedrock-elite.com if you want to add another language!). These are supported on the i5, i9, i10, and BTB115. Conveniently, you can switch languages in real time, without requiring a reboot of your device. Of course, this update can be downloaded for free on our website.

Furthermore, we have modernized the i-series product design with newer hardware. In practice, the i-series 5 and 9 models (i5 and i9) with an industrial design philosophy aligned to i10. This revamp includes a modern display with capacitive touch, similar to i10, and a redesigned housing. By relocating internal components, we created space for a battery caddy on the lower back of the housing. Battery replacement is now simple and safe — it can be done in about a minute. Finally, the revamp enables faster firmware updates, more than tripling the previous update speed.

As always, your feedback and bug reports are greatly appreciated. If you feel that some text should be translated differently in one of the languages, feel free to reach out as well.
